Internet Applications and Emerging Technologies

The course ends where its readers live: on the internet, and just ahead of it. This unit first names the tools you already use every day - the browser, the search engine, the communication apps - and teaches you to use them deliberately rather than habitually. It then turns to the technologies arriving in classrooms: artificial intelligence, the Internet of Things, blockchain, and virtual and augmented reality. For each, the same three questions from Units 4 and 5 come along: what is it really, what can it do for a school in Pakistan, and what should a careful teacher watch for?

Unit learning outcomes

By the end of this unit you should be able to:

- Explain what a web browser and a search engine each do, and use search strategies deliberately.
- Match online communication tools to their purposes.
- Apply safe browsing practices, including judging a website before trusting it.
- Explain artificial intelligence, blockchain, the Internet of Things, and virtual and augmented reality, and analyse their societal impact.

Prerequisite knowledge

Units 1 to 5, especially Unit 4 (threats and verification) and Unit 5 (checking before sharing).

In this unit

1. [Topic 6.1 - Browsers, search engines, and online communication](#) - the tools of the everyday internet, used deliberately.
2. [Topic 6.2 - Browsing safely](#) - judging sites and links before trusting them.
3. [Topic 6.3 - Artificial Intelligence and the Internet of Things](#) - the technologies that learn and the technologies that sense.
4. [Topic 6.4 - Blockchain, Virtual Reality, and Augmented Reality](#) - the ledger and the two realities.

How to use this unit

Topics 6.1 and 6.2 sharpen tools you already hold; 6.3 and 6.4 open boxes you have heard named but not opened. Keep a running "emerging technology briefing" notebook from Topic 6.3 onwards: the course's final practicum idea is a one-page briefing to a head teacher, and every topic feeds it.
