Compiled with problems:

This unit is complete and passes the platform's automated checks, but no reviewer has read it yet. Treat its sources and claims with care.

ERROR in ./docs/semester-1/ggur-300/unit-03/topic-01.mdx

Module build failed (from ./node_modules/@docusaurus/mdx-loader/lib/index.js):

Error: MDX compilation failed for file

"/home/a2ahs/mega book for B.Ed/.claude/worktrees/agent-affcb48d7818e8183/docs/semester-1/ggur-300/unit-03/topic-01.mdx"

Cause: Unexpected character `=` (U+003D) before name, expected a character that can start a name, such as a letter, `\$`, or `\_`

Details: Topic 1.1's definition: every later skill should be introduced as an

instance of "reasoning with numbers for a decision".

    "discussion, problem-solving, and brainstorming. In this unit:
```

```
    "_index": 0,
```

- Use the "141:36" lecture shape for Topic 1.1: present the classroom situation-and-answer your way to the definition rather than dictating it.

```
  },
```

- Run Topic 1.2's "one-minute estimate challenge" exactly as timed: the time pressure is what forces estimation instead of counting.

- Use the guide's brainstorming mode for Topic 1.3's activity: collect the pairs' responses and choose the best one.

at compileToJSX

1. **"Quantitative reasoning means doing hard calculations."** Probe with a task that needs no calculation at all: "The ground fits 80 and 63 signed up - what else do you want to know before deciding?" Trainees who reach for a formula are stuck in the old frame.
2. **"Estimation is just guessing."** Ask for the method behind an estimate. If a trainee cannot name a strategy, it was a guess; make the class supply the missing strategy.
3. **"There is one correct method for every problem."** Deliberately solve one problem two ways on the board and ask the class to check both; when both survive the look-back, the misconception is refuted by demonstration.

Running the activities

- **Sort the school day (Topic 1.1):** prepare the twelve slips in advance and include at least two ambiguous ones (ordering chalk for the month) so the pairs have something to argue about. Debrief by asking for the decision each quantitative task serves.
- **The one-minute estimate challenge (Topic 1.2):** award points for method, never for closeness, or the activity collapses into guessing. Keep the true figures hidden until the debrief.
- **Spot the broken step (Topic 1.3):** the three flawed reasonings should each break a different move (a false if-then, a pattern over-read, a bad elimination). Ask pairs to name the move, not just the flaw.

Practical work

The guide's practical work (group work, group assignments, individual assignment, presentations) maps onto this unit as: group work in the three topic activities; a group assignment collecting the class's practicum notes into one "school decisions" wall; an individual assignment in the Topic 1.2 practicum task; and presentations in the unit's debrief, where each group presents one reconstructed decision.

Assessment guidance

The unit-end bank samples all three topics. When marking the ERQs, resist the temptation to reward arithmetic alone: the rubrics weight the Analyze criteria (missing quantity, alternative explanations, limit of the method) precisely because the unit's claim is that reasoning outranks calculation. A note that checks the arithmetic but names no missing quantity is a pass at best; the distinction goes to the trainee who asks what the numbers leave out.

Practicum links

Trainees collect two artefacts this unit: a teacher's real numeric decision (Topic 1.1) and an estimate with its true figure (Topic 1.2). Both feed ERQ-5. Warn trainees to seek permission before counting anything, and to anonymise names in anything they write up.
