Intelligence and Creativity - teacher notes

For the teacher educator. The course guide allots **Week 10** to Chapter 5 - a single week for theories of intelligence, multiple intelligences, measurement, creativity and giftedness. The unit is built to that scale: two topics, one session each, with the talent-show activity bridging them.

Teaching strategies

The guide names lectures, interactive discussion, question-answer, demonstration and case study analysis. In one week, choose ruthlessly.

Run the two-pupils case first. Salman and Kiran open the unit because the staff room's two words are the theory the trainees already hold. Let the room argue about the labels before any theory is named; the axis then arrives as a map of positions the room has already taken.

Hold the evidence honestly, and make the trainees do it too. This unit's signature skill is holding a theory's appeal and its evidence caution at once. The talent-show activity is designed to force the distinction: the show demonstrates pupil difference abundantly, and demonstrates the eight-intelligences theory not at all. Do not resolve the tension for the room; the CLO 4 outcome is the holding.

Mark something with the fifth box. The originality box is the unit's most portable idea. Have trainees mark the two village essays with and without it in the session, so the marking plan's silence becomes visible rather than described.

Sequencing across the week

Session	Focus	Leave time for
First session	Topic 5.1 - the axis, the caution, the measurement facts	the two-pupils argument and the score table
Second session	Topic 5.2 - creativity's parts, giftedness as need	the talent show and the fifth-box marking

If a session is lost, cut the measurement detail before the evidence caution. The mean and the deviation are facts a trainee can look up; the habit of asking what a score does not show is the unit's transfer.

Misconceptions to expect, and how to handle them

"Multiple intelligences is proven." Usually held warmly, by trainees who have seen pupils saved by the wider lens. Do not argue it down: state the criticism's content (the eight do not separate in test data), state the appeal's content (abilities are wider than schools sample), and hold both on the board. The room's discomfort at holding both is the learning.

"Learning styles and multiple intelligences are the same thing." The commonest confusion in the unit. Untangle with the two questions: does the theory claim teaching should match a diagnosed style (styles - weak evidence), or that abilities are multiple (intelligences - disputed but different)? The residue either way is multimodal teaching.

"IQ measures how intelligent you are." Meet it with the sampling point: the score summarises the sampled tasks, and Kiran's wire is not in the sample. The

history (early misuse) lands the humility better than the statistics do.

"Gifted pupils will be fine on their own." The early finisher is the counter, and the research summary behind him: boredom, then behaviour problems. Ask what "more worksheets" actually trains, and let the room design the alternative.

Language and access

The unit's key terms are banked where banked (ذہانت، متعدد ذہانتیں، تخلیقیت، ذہین (متعلم). The axis vocabulary (one factor to many abilities) is worth keeping on the board in both languages for the whole week; trainees use it in every argument.

Practical work

The guide's practical component for this chapter is a case study analysis: **each trainee brings one pupil (anonymised, five lines) whose ability the school's examinations undersample, and the group designs the fifth box - an originality criterion - for that pupil's subject.**

Run it in the second session after the fifth-box marking. Groups of four produce the criterion, its weight, and one sample task that could earn full marks under it. Fifteen minutes plus presentations. The criteria are collected and become the session's artefact: a staff-room wall of boxes the usual plan lacks.

Assessment notes

The unit's formative work sits in the two topics' [Check your understanding](#) blocks (ten items across the unit, above the five-to-eight floor). The [unit-assessment](#) page carries the graded bank with worked responses and rubrics in its final bounded section.

ERQ 5 is the capstone and integrates both topics by design; schedule it after the practical work so the task design has a real subject. ERQ 1 rewards the theory-identification skill the first session trains; set it as the week's written homework.

Tip: select any text on this page first to comment on that specific passage - or leave nothing selected for general feedback.
