• Explain what quantitative reasoning is and why it matters for a teacher.

• Apply reasoning to judge the size and reasonableness of quantities.

• Estimate and approximate using grouping, rounding, front-end digits, and compatible numbers, and judge when an estimate is good enough.

• Use the logical-reasoning moves (pattern, if-then, deduction, elimination)

and the four-step problem-solving strategy on real school problems

"reason": "Unexpected character `=` (U+003D) before name,

expected a character that can start a name, such as a

letter, `\$`, or `\_`

"ruleId": "unexpected-character",

No prior knowledge is required. This unit has

comprehensive knowledge of everyday

arithmetic comfortably.

at compileToJSX

# In this unit

1. [Topic 1.1 - What is quantitative reasoning and why does it matter?](#) - the nature and importance of quantitative reasoning.
2. [Topic 1.2 - Number sense, estimation and approximation](#) - numeracy, number sense, and the estimation strategies.
3. [Topic 1.3 - Logical reasoning and problem-solving strategies](#) - the reasoning moves and the four-step strategy.

## How to use this unit

Work through the three topics in order; each builds on the last. In every topic, read the classroom situation first, then work through the explanation with a pencil and paper, and do the activity with your classmates rather than alone. The "Try this at your practicum school" tasks collect real material you will use in the unit assessment, so keep your notes. Glossary terms are underlined; hover or tap them for the Urdu definition.

Tip: select any text on this page first to comment on that specific passage - or leave nothing selected for general feedback.
