

Draft - expert review pending

This unit is complete and passes the platform's automated checks, but no reviewer has read it yet. Treat its sources and claims with care.

Unit 4 teacher notes

Sequencing note

The topics run from outside in: the threats that arrive (4.1), the trail you leave (4.2), the locks you control (4.3), and the duty you carry for others' data (4.4). Topic 4.1 is the longest and the anchor: its threat vocabulary is used by every later topic. If time is short, protect 4.1 and 4.4 - the incoming threat and the children's data - above all.

Common misconceptions to probe

1. **"My data is not worth stealing."** Probe with the school marks sheet and the parent-contact list: who is harmed when they leak? The account itself is also valuable as a phishing launcher in your name.
2. **"Antivirus software alone keeps me safe."** The head teacher's story in 4.1 is the cure: she was phished, and no scanner watches a human typing a real password into a real-looking page.
3. **"The cloud is a place in the sky."** Ask where a file physically is when saved to the cloud; the answer (a data centre, on machines you rent by the minute) reframes every later privacy question.
4. **"A strong password is enough."** Probe with the phished-MFA scenario: what does the attacker still lack?
5. **"Privacy rules are for companies, not schools."** The vendor scenario in 4.4: who protects the children when the law is still developing?

Managing the activities

Topic 4.1 - Spot the phish (20 minutes, pairs). Build the four messages yourself beforehand, with real-looking details and deliberate tells. The trap is verdicts without evidence; require the single strongest tell for each. The "action instead of replying" step is the real assessment.

Topic 4.2 - The three-question audit (15 minutes, pairs). The notes are private; do not collect them. The ranking discussion (which traces would an employer see) is where the learning lands. End with the one-setting change, and follow it up next session.

Topic 4.3 - Password workshop (20 minutes, pairs). The trap is writing an actual password down anywhere shared; insist on methods, not secrets. The office scenario (shared password among five people) is deliberately close to home - let the discomfort do the teaching.

Topic 4.4 - The vendor visit role-play (20 minutes, groups of four). Play the first pass quickly so the second pass shows the difference the four questions make. The vendor should improvise plausible-but-vague answers ("our servers are very secure"); teach trainees to notice vagueness as an answer.

Working with the guide's strategies

Case study analysis is this unit's natural form: the head teacher's phishing story, the shortlisted candidate's search results, and the vendor visit are ready-made cases - open each topic with its case before any explanation.

Demonstrations work well in 4.3: show a real MFA prompt (or a screenshot), and show a password-strength checker on an invented password. **Interactive discussion** fits the misconception probes. **Question-answer sessions** suit the end of 4.1 using the phishing tells as rapid rounds. **Lectures** are needed only for the CIA triad and the NIST definition - keep them to the figures.

Practical work and practicum links

- **Hands-on computer exercises:** turning on MFA on a real account, checking privacy and location settings, and searching one's own name in two search engines.
- **Individual assignments:** the footprint audit (4.2) and the data-protection plan (4.4).
- **Group assignments:** the phishing spot and the vendor role-play.
- **Internet research tasks:** optional - find whether a favourite app has had a data leak reported; require a source.
- **Presentations:** the safe-messages guide (4.1) presents well in a staff-meeting format.

The practicum tasks (the office's notice channels, the shared-password question, the one-day data inventory) feed Unit 5's ethics discussions and Unit 6's emerging-technology briefing, where the vendor scenario returns with a new technology attached.
